HAAD FIDA

PRINCIPAL SOFTWARE ENGINEER | RAILS, REACT, REACT NATIVE AND AI-NATIVE TOOLS

Lahore, Pakistan | haad99@gmail.com | haadfida.github.io
linkedin.com/in/haadfida | github.com/haadfida

PROFILE

Principal Software Engineer with five years of Ruby on Rails, React, TypeScript and React Native, building an enterprise asset-management SaaS across web and mobile. Promoted through four engineering levels; leads technical delivery across a 10-engineer team while staying hands-on. Builds AI-native tools on the side: agents that answer questions about operational data and act on it. Based in Lahore, Pakistan (UTC+5).

CORE SKILLS

Frontend and mobile: React and TypeScript (5 years), React Native (5 years), JavaScript, Redux, HTML/CSS, WCAG 2.1, Jest

Backend and data: Ruby on Rails (5 years), REST, GraphQL (1 year), Node.js (2 years), Python integrations (2 years), MySQL

AI and delivery: Anthropic and OpenAI APIs, MCP, agent evals; AWS deployments, CI/CD, TDD, code review, mentoring; Claude Code, Codex and Cursor under reviewed plans

EXPERIENCE

Asset-management SaaS company | Enterprise web and mobile products | August 2021 - Present

Principal Software Engineer | August 2026 - Present
Senior Software Engineer | July 2024 - August 2026
Software Engineer II | January 2023 - July 2024
Associate Software Engineer | August 2021 - January 2023

SELECTED CONTRIBUTIONS

- Led technical delivery across a 10-engineer team modernizing a 10+ year production platform into reusable React and TypeScript architecture; migrated its largest module from legacy jQuery patterns.
- Delivered work-order creation, module and listings end-to-end across a shared codebase serving three products, with supporting Rails APIs; preserved data integrity across linked modules.
- Reduced a critical work-order workflow from roughly 3 seconds to below 500 ms through React migration and application and data-flow optimization.
- Cut bulk checkout for 10,000+ assets from over an hour to about one minute by removing application and database bottlenecks.
- Built backend APIs and secure integrations using OAuth 2.0, encrypted state, JWT with DPoP, rate limiting and secure S3 uploads.
- Shipped React Native releases to the App Store and Google Play, including React Native upgrades and SAML SSO login migration.
- Evolved shared components and implementation patterns, reviewed code, mentored engineers and coordinated delivery across product, design, QA and backend.

SELECTED PROJECTS

AssetPilot | Live demo | Code
AI operations agent for IT inventories: a tool-using Claude agent streamed over server-sent events, a live dependency graph, an MCP server exposing the same tools, and a 55-case eval suite. Rails 8.1, PostgreSQL, React 19, TypeScript.

PSX Monitor | Live demo | Code
Stock intelligence dashboard for the Pakistan Stock Exchange: composite scoring, sell-signal engine and Claude-powered news analysis with a keyless demo mode. React, Vite, Claude API, Supabase.

EDUCATION

BS Computer Science | FAST NUCES | 2016 - 2021
